

EXCEEDS YOUR EXPECTATIONS

SelfService

Pumping unit

Due to constantly rising fuel prices, people in the know are always looking out for accurate and reliable fuel-dispensing systems.

Market REQUIREMENTS are increasingly precise and demanding:

- I want a reliable filling station; my drivers are always in a hurry and they're not very gentle with machines.
- I'm the one to decide who is allowed to refuel, and without wasting time.
- I want a fuel management system that can control and register all fuel dispensing along the entire line of distribution.
- And I need this information on my PC, but don't ask me to put up a data-transfer line – it costs too much.
- I want my figures to balance exactly: I need a fuel-meter that maintains accuracy even at low flow-rates.
- I can't afford to run out of fuel: I need an accurate level-indicator that will alert me when stocks are running low and stop the pump when the tank is empty.

But we offer easy SOLUTIONS:

“Self Service Mechanical”

- sturdy and compact build, easy access for maintenance
- high flow-rates for quick refuelling
- can mount water-stop filters on the delivery side

“Self Service Electronic Fuel Management”

Besides having the same features of the Self Service line, these products also have the following advantages:

- integrated Fuel Management System
- access controlled by a PIN code or an electronic KEY
- extreme measurement: $\pm 0.5\%$
- data-transfer to PC
- can print data and/or delivery receipts
- built-in tank-level indicator
